

CS 223 Foam Cleaner

Description

CS-223 is a broad spectrum foam cleaner designed for cleaning floors, walls, ceilings and processing equipment. CS-223 penetrates fruit and vegetable sugar residues on packing lines so they can be rinsed away prior to sanitizer application. CS-223 can also be used as a general purpose cleaner for floors, tile, painted surfaces and plastics. Proper use of CS-223 results in a cleaner surface which can be effectively sanitized with proper use of an approved surface sanitizer.

Benefits

- Multipurpose cleaner
- Compatible with a wide range of equipment surfaces
- Regular use reduces labor associated with mechanical cleaning or scrubbing

Principle Use

This product is designed to be used on a variety of surfaces on a daily basis to prevent a build-up of grime. CS-223 is formulated to be an efficient cleaning agent to prepare surfaces for an effective sanitation treatment. Some mechanical scrubbing may be required on highly soiled surfaces.

Composition

This product is a mild surfactant based cleaner.

Directions

Apply CS-223 after rinsing processing equipment or other surfaces with fresh water. Remove any left over product and associated debris from processing equipment before applying CS-223. Apply CS-223 in a proper dilution system at a rate of 1 part soap to 5, 10 or 20 parts water. Allow foam to contact equipment surfaces for 10 minutes, and do not allow product to dry on surfaces before rinsing. Thoroughly rinse from equipment surfaces before applying sanitizers or resuming production operations.

CLEANING
