

# WORKING SMARTER AND FASTER IN THE CLASSROOM

## FARM MANAGEMENT

Students learn how to divide farms into management zones and record detailed information that will aid in crop production and farm management practices.

## CROP IQ

Research products being used in the industry today, then record the application details and create custom tank calculations.

## SCOUTING

Identify pest, disease and nutritional deficiencies in the field, then create custom treatment plans in CropIQ.

## LABS

Learn how to properly pull representative samples and interpret the results for better farm management practices.

Nearly 60,000 high-skilled agriculture job openings expected annually in U.S.\*

# 60k

 **highlandHUB™**

**“Is this program being implemented in today’s agricultural curriculum?”**

Many of our customers are asking this question, and the answer is yes.

Highland Hub is an easy-to-use, web-based farm management application used to record and organize data across the farm; that includes spray records, food safety, scouting reports, and lab results.

HPA now offers the Highland Hub to our agricultural educators, providing access to the exact application that numerous farms are implementing in their own operations.

Join our training session at the FFA State Convention. It is open to all agriculture educators that are interested in purchasing the Highland Hub for their classroom.

## Training Day for Educators
